

PolySeed®

Technical Report

Seed Solution Strength/Turbidity

Although every lot of PolySeed is manufactured using the same product formulation, prepared PolySeed solution can appear very clear, slightly clear, or cloudy, depending on which bacterial carrier is present in that particular product lot.

Because the various carriers have no bearing on PolySeed's bacterial count, the variation in the appearance of the prepared solution is not indicative of the strength of the seed and should not be taken into consideration when determining the amount of seed to use in testing.

CLEAR-----CLOUDY

For consistent test results always follow the [PolySeed Application Procedures](#) when preparing dilutions. The cloudiness or clarity of the PolySeed solution does not indicate a "stronger" or "weaker" batch of seed and should, therefore, not be used as a basis for changing or adjusting the amount of seed used in testing.
